www.eepod.com

We are an engineering firm that specializes in vehicle communication networks and electronics. We develop both custom and standard products for various transportation industries. While we try to use off-the-shelf standard electronic enclosures for our products, we usually need customizations such as connector cutouts or LED/LCD display openings. We bought the PCNC1100 mill so we could do our own prototyping and small production runs quickly.

While we are an engineering firm, no one on our staff had any CNC experience. Despite our lack of knowledge, we were able to create a custom aluminum fixture for the machining vise and develop a CNC program to make a simple connector cutout within two days. Thanks to the Tormach manual and examples, by the end of the second day, we had successfully made our first 100 parts!

We can already see that this machine will be a tremendous asset to our quick-turn engineering capabilities for the future and many ideas about what we can do have already started.
