

Customer Showcase

File name: Steelwerks.pdf

Background:

Product Development & Prototyping

With both jewelry and machining backgrounds we are able to bring more to the table than just the capabilities of our machines. Focused on all aspects of creativity and design when it comes to a specific project we are able to work with clients specifications and ideas. Fully trained and licensed in CAD/CAM software we are able to provide our client with detailed drawings of the part or prototype they have in mind.

Our clients range from Fashion industry designers, Bicycle companies, Jewelry designers, Medical and Science, RC car enthusiasts, or just that guy in the garage trying to bring an idea to life.
