CS-Len Sihlis

Background:

Most of my work is in steel and aluminum. Although I have AlibreCAM software, I write most of my g-code by hand and do simple cuts with manual data input. I have done a couple of projects for others.

I have made many custom parts for my van such as the attached photos of the pitman arm and adapter plate. The pitman arm required an internal tapered serrated spline that was cut with a single point tool as the part was held on the rotary table.

The coin is an antique replica shekel was engraved in steel with a carbide cutter. I actually made 30 of them.
