CS135_Dave-US Marines_Plaques

Background: I purchased an ArtCam program for my Tormach Milling machine and have been making some cool name plates for machines I build. I currently have a job for the US Marines, and am machining the plate right now. The machine is great, it works very well. I did not install the update program because there is no problem with the machine. You have a good product. I did have to install a fan on the X axis motor, the machine will run for 20 hours sometimes, so that motor was getting hot. Here's the picture of my completed project for the US Marines.
