

## Customer Showcase

CS151-Bike Project

**Background:** We are using it a lot for rework of parts we get from outside vendors and have been producing some new prototype parts as well. I am working on an old café bike project and doing a complete frame up re-build/custom, attached is the front disk off a 1975 Honda CB400F that I modified for lighter weight and visual coolness, I still need to refinish the hub area.
